DETAILED ACTION

EXAMINER'S AMENDMENT

1. The application has been amended as follows:

In specification, page 1, paragraph [0004], line 7, deleted "from the" and inserted
---from the power mains---.

Drawings

2. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the drawings filed on 4/17/06 do not provide Fig.7. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Allowable Subject Matter

3. Claims 1-8 are allowed.

Prior art of record fails to disclose or fairly suggest, alone or in combination, a ballast protecting device, comprising: a voltage sensing circuit, a current sensing circuit, a pulse forming circuit, a voltage sensing block and switch unit and controller and particularly including "controller means operatively connected to the pulse forming circuit and the switch unit for determining a phase angle difference between the reference signal and the current through the device and for controlling the switch unit in response

to the determined phase angle difference, wherein the switch unit electrically disconnects the second voltage input terminal from said another output terminal of the device when the controller means determines an undesired phase angle trend", in combination with the remaining claimed limitations as recited in claim 1 (claims 2-7 are allowed, since they are dependent on claim 1).

Prior art of record fails to disclose or fairly suggest, alone or in combination, a method for controlling a ballast current, the method comprising establishing a reference phase angle of an input voltage; sensing a phase angle of an input current with respect to the reference phase angle and particularly including "analyzing the pulses and determining a trend of a relative input current phase angle over a time period; and interrupting the ballast current upon determining an adverse phase angle trend", in combination with the remaining claimed limitations as recited in claim 8.

Citation of relevant prior art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Prior art Kominami et al (U.S. Patent No. 6,133,696) discloses a dimmable self ballasted fluorescent lamp.

Prior art Shen (U.S. Patent No. 6,534,933) discloses a high power factor electronic ballast with load dependent bus voltage regulation.

Prior art Chang et al (U.S. Patent No. 6,326,740) discloses a high frequency electronic ballast for multiple lamp.

Prior art Poletti (U.S. Patent No. 6,191,568) discloses load power reduction control and supply system.
